## IMPORTANT NOTIFICATION

International application No.  
PCT/GB99/02082

International filing date (day/month/year)  
12/07/1999

Priority date (day/month/year)  
11/07/1998

Applicant  
VORGEM LIMITED et al.

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

## 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

# INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/GB99/02082

## I. Basis of the report

1. This report has been drawn on the basis of (substitute sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to the report since they do not contain amendments.):

**Description, pages:**

1-13 as originally filed

**Claims, No.:**

1-31 as received on 31/07/2000 with letter of 28/07/2000

### **Drawings, sheets:**

1/8-8/8 as originally filed

**2. The amendments have resulted in the cancellation of:**

the description, pages:

the claims, Nos.: 32

the drawings. sheets:

3.  This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)).

#### 4. Additional observations, if necessary:

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT**

International application No. PCT/GB99/02082

**V. Reasoned statement under Article 35(2) with regard to novelty, inventiveness step or industrial applicability; citations and explanations supporting such statement**

**1. Statement**

Novelty (N)	Yes:	Claims 1-4, 6-11, 13-15, 20-30
	No:	Claims 5, 12, 16-19, 31
Inventive step (IS)	Yes:	Claims
	No:	Claims 1-4, 6-11, 13-15, 20-30
Industrial applicability (IA)	Yes:	Claims 1-31
	No:	Claims

**2. Citations and explanations**

**see separate sheet**

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB99/02082

**Re Item V**

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following documents:

D1: DE 27 36 262 A (NORTHERN TELECOM LTD) 16 March 1978 (1978-03-16)  
D2: WO 98 07002 A (BECKMANN WILLIAM GEORGE ;VORGEM LIMITED (GB); HICKS SIMON ERIC (GB) 19 February 1998 (1998-02-19) cited in the application  
D3: US-A-5 225 888 (SELWYN GARY S ET AL) 6 July 1993 (1993-07-06)

2. **Method claims 1-4**

2a. **Claim 1**

Document D1 discloses a method of determining the progress of a plasma based etching process comprising the steps of continuously monitoring a predetermined frequency of radiation emitted from the plasma and of developing a graphical output corresponding to the level of emittance (cf. page 8, last para - page 9, first para). This graphical output is reproducible for subsequent etching processes and therefore enables an operator to obtain an indication of the progress of the process by visual comparison of the shape of the actual output with the predicted output. In particular the shape comprises several characteristic features which allow the determination not only of the end point but also of process progress (cf. page 9, last para - page 10, first para; figure 3).

From this disclosure the subject-matter of claim 1 differs only in that the comparison is performed electronically. The objective technical problem may therefore be regarded as how to automatize the method of process monitoring disclosed in D1. This problem is a standard problem in process automatization.

Once this particular problem has been formulated, it would be straightforward for the skilled person to replace the visual comparison of the shape of the measured signal with the shape of the predicted signal by an electronic comparison, thereby

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB99/02082

arriving at the subject-matter of claim 1 without the exercise of inventive skill. An indication towards electronic comparison is even provided in D1 where the use of a comparator circuit in addition to the graphical output is disclosed (cf. page 8, last para - page 9, first para).

**2b. Claims 2-4**

The additional features of these claims are known from D1 (cf. page 8, last paragraph - page 9, first paragraph; page 8, paragraph 3; page 9, last paragraph - page 10, first paragraph).

**3. Apparatus claims 5-31**

**3a. Claims 5 and 12**

Claims 5 and 12 translate the features of claim 1 into apparatus features and are not considered to be inventive in view of D1, the argumentation being analogous to the one given for claim 1.

In addition document D2 discloses a process control system for controlling a thin layer etching process including means for continuously monitoring an optical frequency differentiated sample of radiation reflected from or transmitted by the layer and shape recognition means in the temporal domain for comparing the measured output against a predicted output or trend to provide an indication of progress of the process (cf. abstract; page 6, line 32 - page 8, line 22).

The formulation "optical frequency differentiated radiation from the process" used in claim 5 and "time evolving spectral output from a reaction" used in claim 12 are so broad that the subject-matter of claims 5 and 12 does not meet the requirement of novelty in view of D2.

**3b. Claims 6-11 and 13-31**

Dependent claims 6-11 and 13-31 do not contain any features which, in combination with the features of any claim to which they refer, meet the require-

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB99/02082

ments of the PCT in respect of novelty and inventive step (Article 33(3) PCT), the reasons being as follows:

**Claims 6-9:**

The use of shape recognition means operating in the optical frequency domain is described in document D3 disclosing an interferometer for identifying trace constituents in a plasma during processing of semiconductors (cf. figure 4; column 7, line 67 - column 8, line 5; column 8, lines 11-12). In particular, D3 discloses the use of a Fabry-Perot etalon as well as the use of a tiltable narrow bandpass interference filter to scan a small range of wavelengths (cf. column 4, lines 34-39 and lines 48-51). The use of software as a shape recognition means operating in the optical frequency domain is described in D2 (cf. page 13, lines 16-19).

**Claims 10, 11, 13-15, 24-27:**

Radiation detecting means comprising a thin film filter or a monochromator and an interference device, in particular a Fabry-Perot interferometer, are disclosed in D3 (cf. column 7, line 67 - column 8, line 12; figure 4). The simultaneous examination of a plurality of spectral ranges is considered to be an obvious way of obtaining additional information about the process to be controlled.

**Claims 16-23:**

The use of a digital filter for determining the shape of the time evolving spectral output is known from D2 (cf. page 13, lines 20-29). The shape recognition methods of claims 17-23 are standard methods known to the skilled person. In particular the use of the Gradiometer, Fourier, and Liplike transforms is disclosed in D2 (cf. page 13, lines 29-32; page 14, lines 27-30).

**Claims 28-30:**

It is common general knowledge that gaseous compounds display characteristic fingerprints not only in emission but also in absorption. The observation of light absorption at a characteristic wavelength is therefore an obvious alternative for obtaining information about the gaseous species involved in the process. Lasers are standard light sources used in absorption spectroscopy.

**Claim 31:**

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB99/02082

Plasma based processes are described both in D1 (cf. title) and in D2 (cf. title).

**Re Item VII**

**Certain defects in the international application**

1. Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1 and D3 is not mentioned in the description, nor are these documents identified therein.
2. The description is not in conformity with the claims as required by Rule 5.1(a)(iii) PCT.

M 01-07.00

14

## 1   Claims

2

3   1. A method of automatically determining the progress  
4   of a process using reactive species or generating  
5   product species, including continuously monitoring  
6   a predetermined frequency or frequency band of  
7   radiation emitted from or absorbed by the species,  
8   developing a graphical or numerical output  
9   corresponding to the level of emittance or  
10   absorption, and electronically comparing the shape  
11   of that output with a predicted output or trend to  
12   provide an indication of the progress of the  
13   process.

14

15   2. A method as claimed in Claim 1, further comprising  
16   generating a control signal for controlling the  
17   process when a predetermined stage in the process  
18   progress is attained.

19

20   3 A method as claimed in any one of Claims 1 or 2,  
21   wherein the process is plasma based.

22

23   4. A method of processing a semiconductor workpiece  
24   including determining the process progress as  
25   claimed in any one of claims 1 to 3 and  
26   controlling the process in response to the  
27   indication provided.

28

29   5. A process control system for controlling a process  
30   using reactive species or generating product  
31   species, including means for continuously  
32   capturing an optical frequency differentiated  
33   sample of radiation from the process, a detector  
34   for producing an output indicative of the time  
35   varying intensity of the radiation, and shape  
36   recognition means in the temporal domain for  
37   comparing the output against a predicted output or

1           trend to provide an indication of progress of the  
2           process.

3

4         6. A system as claimed in claim 5, wherein the  
5           optical frequency differentiated sample of  
6           radiation is processed by a shape recognition  
7           means operating in the optical frequency domain  
8           prior to its processing in the time domain.

9

10        7. A system as claimed in claim 6, wherein the shape  
11           recognition means operating in the optical  
12           frequency domain is a specifically designed  
13           'Fabry-Perot' etalon having a series of passbands  
14           which are linearly separated in wavenumbers which  
15           correspond to the vibrationally broadened  
16           molecular series of the chemical constituent which  
17           is characteristic of the process being monitored.

18

19        8. A system as claimed in claim 7, wherein the  
20           'Fabry-Perot' etalon is scanned in centre  
21           frequency by continuously tilting it about a rest  
22           position.

23

24        9. A system as claimed in claim 6, wherein the  
25           frequency differentiated sample of radiation is  
26           derived from a monochromator means and the shape  
27           recognition means operating in the optical  
28           frequency domain is implemented in software  
29           following the detection of the signal and its  
30           conversion to an electrical signal.

31

32        10. A system as claimed in Claim 5, wherein the  
33           radiation capturing means includes an optical  
34           output, a thin film filter and an interference  
35           device.

36

37        11. A system as claimed in Claim 10, wherein the  
38           interference device is a 'Fabry-Perot' etalon.

1  
2     12. A process control system wherein a time evolving  
3       spectral output from a reaction is detected by a  
4       spectral detection means and then used in  
5       combination with the application of shape  
6       recognition techniques to provide a continuous  
7       measure of process progress against a predicted  
8       trend.  
9  
10    13. A process control system as claimed in Claim 12,  
11       wherein the spectral detection means includes the  
12       combination of a thin film filter with an  
13       interference means.  
14  
15    14. A process control system as claimed in Claim 13,  
16       wherein the interference means is a 'Fabry-Perot'  
17       etalon.  
18  
19    15. A process control system as claimed in Claim 13,  
20       wherein the interference means is a scanned  
21       'Fabry-Perot'.  
22  
23    16. A process control system as claimed in any one of  
24       claims 12 to 15, including a digital filter for  
25       determining the shape of the time evolving  
26       spectral output.  
27  
28    17. A process control system as claimed in any one of  
29       Claim 12 to 15, wherein the shape recognition is  
30       achieved by a series of masks derived from  
31       different time epochs using a Gradiometer  
32       transform.  
33  
34    18. A process control system as claimed in any one of  
35       Claims 12 to 15, wherein the shape recognition is  
36       achieved by a series of masks derived from  
37       different time epochs using a Fourier Transform.  
38

M 31.07.00

17

- 1 19. A process control system as claimed in any one of  
2 claims 12 to 15, wherein the shape recognition is  
3 achieved by a series of masks derived from  
4 different time epochs using a Laplace Transform.  
5
- 6 20. A process control system as claimed in any one of  
7 claims 12 to 15, wherein the shape recognition is  
8 achieved by a series of masks derived from  
9 different time epochs using the Kohonen self  
10 organising map.  
11
- 12 21. A process control system as claimed in any one of  
13 claims 12 to 15, wherein the shape recognition is  
14 achieved by a series of masks derived from  
15 different time epochs using the cellular neural  
16 network paradigm.  
17
- 18 22. A process control system as claimed in any one of  
19 claims 12 to 15, wherein the shape recognition is  
20 achieved by a series of masks derived from  
21 different time epochs using Polynomial  
22 Interpolated Measures.  
23
- 24 23. A process control system as claimed in any one of  
25 claims 12 to 15, wherein the shape recognition is  
26 achieved by a series of masks derived from  
27 different time epochs using the method of  
28 Fractals.  
29
- 30 24. A process control system as claimed in any one of  
31 Claim 12 to 23, wherein the spectral detection  
32 means includes a dispersive grating monochromator.  
33
- 34 25. A process control system as claimed in any one of  
35 claims 12 to 23, wherein the spectral detection  
36 means includes a scanned 'Fabry-Perot'  
37 interferometer.  
38

- 1        26. A process control system as claimed in any one of  
2              Claims 12 to 23, wherein the spectral detection  
3              means includes a Fourier Transform Spectrometer.  
4
- 5        27. A process control system as claimed in any one of  
6              claims 12 to 26, wherein a multiplicity of  
7              spectrum parts are examined simultaneously.  
8
- 9        28. A process control system as claimed in any one of  
10             claims 12 to 26, wherein the spectral detection  
11             means detects the absorption spectrum of light of  
12             a particular characteristic wavelength.  
13
- 14       29. A process control system as claimed in any of  
15             claim 28, including a laser as a light source for  
16             providing the light of the particular wavelength.  
17
- 18       30. A process control system as claimed in any of  
19             claims 29, including a frequency swept laser as  
20             the light source.  
21
- 22       31. A process control system as claimed in any one of  
23              Claims 12 to 26, wherein the process is plasma  
24              based.  
25

## INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference <b>P22105/GWO</b>	<b>FOR FURTHER ACTION</b> see Notification of Transmittal of International Search Report (Form PCT/ISA/220) as well as, where applicable, item 5 below.	
International application No. <b>PCT/GB 99/ 02082</b>	International filing date (day/month/year) <b>12/07/1999</b>	(Earliest) Priority Date (day/month/year) <b>11/07/1998</b>
Applicant <b>VORGEM LIMITED et al.</b>		

This International Search Report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This International Search Report consists of a total of 3 sheets.

It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the report

a. With regard to the language, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

b. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international search was carried out on the basis of the sequence listing:

- contained in the international application in written form.
- filed together with the international application in computer readable form.
- furnished subsequently to this Authority in written form.
- furnished subsequently to this Authority in computer readable form.
- the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished

2.  Certain claims were found unsearchable (See Box I).

3.  Unity of invention is lacking (see Box II).

4. With regard to the title,

- the text is approved as submitted by the applicant.
- the text has been established by this Authority to read as follows:

5. With regard to the abstract,

- the text is approved as submitted by the applicant.
- the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. The figure of the drawings to be published with the abstract is Figure No.

- as suggested by the applicant.
- because the applicant failed to suggest a figure.
- because this figure better characterizes the invention.

4

None of the figures.

## INTERNATIONAL SEARCH REPORT

International Application No

PCT/GB 99/02082

A. CLASSIFICATION OF SUBJECT MATTER  
IPC 7 G01N21/73

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 7 G01N

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
